

# Holden Multimedia Interface

Part No: 1279

Many modern Holden vehicles have a nice Mylink High Resolution display installed in the vehicle from factory. However, like most modern vehicles they do lack some important safety features like a reverse camera. This product will add an aftermarket reverse camera into the factory display that will activate when reverse is engaged and add dynamic guidance lines that move when the steering wheel is turned. It includes the following features:-

- Dedicated Reverse Camera input
- Dynamic Guidance Lines
- Additional AV Inputs\*
- Maintains factory Park Sensors
- Made in Korea
- 2 Year Warranty

\*Note:- Audio from the additional Video Sources requires the use of the vehicles Auxiliary input to go through the factory sound system.

## Vehicle Compatibility:

Compatible with the following vehicles with Holden MyLink System Installed:

- Cruze
- Malibu
- Astra
