Q COLLECTION

LED NAVIGATION LIGHTS

THE FUTURE OF LEDS

The LX Collection lights were the first USCG approved LED Navigation Lights in the world, setting the standard for all others to follow. While we've upgraded key features over the last 14 years, there are many of the first generation OGM Series of LED Navigation Lights still in use by military, commercial and offshore boaters around the world today. LX Collection lights run on 9-30V DC.

The Q Collection is the next generation of LED Navigation lights. They incorporate the latest LED technology with a modern modular design to add style to it's rugged aluminum construction. Since the lights are built to last for many years, offering a modular upgradeable design will ensure this light will handle all your standard USCG navigation light requirements today and still be ready for the technology advances of tomorrow, such as energy-harvesting and LiFi communications. Q Collection lights run on 4-48V DC.

The OGM KIS (Keep it Simple) design allows for a variety of uses simply by your choice of mounting brackets. The lights come available with Black or White aluminum housing so you can find a style that's perfect for you. Mix-n-match mounting brackets gives you flexibility to light those challenging areas that you need to light most. 9V-30V DC runs 12 hours on a 9V battery.

A RUGGED TRADITION
