

DETROIT DIESEL SERIES 60[®] CYLINDER HEAD GASKET

Tough Technology Where It's Needed Most... Steel Core, Graphite Clad Sealing Solutions.

AFA offers one of the newest and best design cylinder head gasket for the Detroit Diesel Series 60 engines. This engine is known to be one of the highest mileage engines in use today and demands the highest quality, best engineered gaskets sealing it. AFA is a leader in gasket manufacturing and engineering for over 35 years and our multi-layer Graphite design cylinder head gasket is proof of that lasting expertise.

AFA Part Number D23538406 is made in our own manufacturing plant using only the highest quality materials that are specified, tested and quality controlled throughout the production. AFA uses stainless-steel fire rings and staked-grommets to insure that we have the best sealing capabilities for this engine application. The entire gasket is designed to perfectly fit each application. Tolerances meet or exceed OE specifications. Based on actual field evaluation and customer input, our products frequently contain features not found in the OE product or other competing brands - features that solve unexpected installation and performance issues.

1. GRAPHITE SEALING LAYER

Made from exfoliated graphite flake with no binder or resins - 99% pure carbon. Capable of withstanding temperatures in excess of 5000° F, its corrosion resistance and superior elasticity make this the ideal material for surface sealing the head to the block.

2 CINCH-PLATE LOCKING LAYER

Hundreds of tangs penetrate the graphite facing, and under high pressure, bend and lock the sealing layer permanently in place.

3 RIGID STEEL CORE

Solid steel core provides strength and rigidity not found in competing brands. It protects these head gaskets from damage and assures a sealing surface as smooth and flat as the newly machined parts it seals.

AFA Industries has a complete offering of engine parts for Detroit Diesel Series 50 & 60 engines to rebuild most everything on the engine. From Complete Overhaul Kits to the smallest sealing ring, AFA has you covered for the Series 50 & 60 engine families.
