THE REFINEMENT: SERVICE AND ADVICE OF MARTOR.

What is it that makes our cutting solutions even safer? Our advisory services. We are always there for you and help you with usage examples, training material and, of course, personal assistance.

You will find further information on our website: www.martor.com

At a glance: the safety poster shows the most important functions and correct usage – perfect for your workplace.

From first step to changing the blade: our videos give you a good impression how and for what you can use our cutting tools.

Everything you want to know: dimensions, properties, special features and more about our cutting tools can be found in the Technical Data Sheet.

Any further questions?

Then please do not hesitate to contact our customer service team.
WELCOME TO THE WORLD OF SAFE CUTTING.

The products in this catalogue are generally shown in original size. The few exceptions are indicated on the product page.
Worldwide, the term „Solingen” stands for quality and reliability. This applies to knives and blades. „Made in Solingen” has been a recognised seal of quality for centuries. Just as it distinguishes the history of the MARTOR brand, we have been successful in being a part of Solingen’s reputation. Today, we distribute products to more than 70 countries. We are represented by partner companies in more than 20 countries. They not only supply their MARTOR customers and advise them in detail. They also provide us with ideas from all over the world, which we regularly integrate in our product innovations.

Awards for our products:
Our quest for quality and sophisticated design has been honoured. But your satisfaction is an even greater accolade.

TÜV Rheinland confirms:
MARTOR in Germany has a certified quality management system.
Cutting without risks? That’s somehow a contradiction. We have been motivated in the past years and decades to resolve this contradiction. In 1976 we brought the first TÜV-certified safety knife in the world to the market, our PROFI. Our aim was to continuously improve what was already good. Fully automatic blade retraction followed automatic blade retraction. MARTOR was a pioneer here too. Our product range is now topped off with innumerable cutting tools with concealed blades, the highest safety level.

We have set standards with our GS-certified safety knives that are essential for protection at work. Numerous patents prove our strength to innovate: For us, safe is just not safe enough. Based on our three safety technologies and according to your needs, we aim to develop the „ideal cutting solution“. This also includes, amongst other features, to make the blade change as easy and safe as possible.

We increasingly focus on „user friendliness“. The ambassadors are our new products – for even better ergonomics and a new modern design.

OUR SAFETY KNIVES
= ACTIVE ACCIDENT PREVENTION.

70%

For example: We were able to help a major international furniture chain to reduce the number of cut injuries by about 70% in just two years.

500

You protect your staff with MARTOR - and your expenditure budget. Because every lost work day you avoid saves you up to 500 euros.

MORE SAFETY AT THE WORK PLACE.
OUR THREE SAFETY TECHNOLOGIES.

Safety technologies

Concealed blade
The blade is not open, rather concealed, shielded from both people and goods alike. Giving you a maximum degree of safety from cut injuries whilst cleverly protecting your goods.

Fully automatic blade retraction
The intelligent cutting tool: as soon as the blade leaves the cutting material, it withdraws automatically into the handle - without your having to do anything. That’s what we call „a very high degree of safety."

Automatic blade retraction
Thumbs up for a high degree of safety.
As soon as you start cutting, let go of the slider. The blade will disappear into the handle the moment it loses contact with the material being cut.
TO CUT ROBUST MATERIALS, YOU NEED A PERFECTLY BALANCED TOOL. ONE THAT LIES FIRMLY IN YOUR HAND AND ENSURES YOUR SAFETY WHILE YOU CAN FOCUS ON THE JOB. SUCH A TOOL IS THE NEW SECUPRO 625.
ENDLESS BLADE, ENDLESS DANGER? NOT WITH MARTOR. WE COMBINE EVEN GREATEST CUTTING DEPTHS WITH OUR RELIABLE SAFETY TECHNOLOGIES. FOR EXAMPLE: THE SECU-NORM 380 HAS A BLADE EXTENSION OF ALMOST 8 CM.
SEARCHING FOR THE BEST CUTTING SOLUTION WE ARE ALWAYS OPEN FOR NEW IDEAS AND INSPIRATIONS. A GOOD EXAMPLE: THE EXCEPTIONAL SECUNORM 590, DESIGNED IN CLOSE COOPERATION WITH EXXONMOBIL IN GERMANY TO CUT OPEN BIG BAGS SAFELY.
SAFE CUTTING IS AN ESSENTIAL PART OF THE MARTOR DNA. IN ORDER TO OFFER YOU THE BEST POSSIBLE SELECTION OF PRODUCTS, WE EXTEND OUR RANGE WHEREVER IT MAKES SENSE. FOR EXAMPLE, IN THE FORM OF OUR THREE NEW SAFETY SCISSORS.
OUR PRODUCT RANGE IS LIKE A BIG family FOR us. IT IS ALWAYS DIFFICULT TO PRAISE ONE PRODUCT. AN EXCEPTION: OUR innovations. PLEASE PAY A BIT MORE ATTENTION TO THEM.

OUR LATEST PRODUCTS

SECUPRO 625
Our high-quality squeeze-grip cutter made of aluminium. With ergonomic handle and deep cutting depth. See page 56 onwards.

SECUNORM 380
The world’s first safety knife with approx. 8 cm blade extension and automatic blade retraction. See page 76 onwards.

SECUNORM 590
One metre long. Ideal for working from a safe distance, e.g. for cutting open big bags. For more details see page 110 onwards.

SECUMAX 565
A multi-talented safety scissors. For powerful cuts and much more. To learn more see page 48 onwards.

SECUMAX 564
Our safety scissors with extra-long cutting edge and comfortable support surface. More information on page 50.

SECUMAX 363
Small, swift, precise - and, thanks to the special grinding, as safe as our other scissors. See page 52 onwards.
Concealed blade
The blade is not open, rather concealed, shielded from both people and goods alike. Giving you a maximum degree of safety from cut injuries whilst cleverly protecting your goods.
More fun while you work? Try it out.
The new SECUMAX 350 is a combination of versatility, comfort and safety. A maximum degree of safety. Featuring an innovative blade change, this cutter is multi-talented. It can be used to cut all standard materials, from film to plastic-strapping, from paper to 2-ply cardboard. It splits adhesive tape easily too. And it is so comfortable to hold that you won’t want to put it down.

2-in-1 blade head
Double function, doubly useful: with two cutting edges and two tape split-ters, this multifunctional blade head exceeds itself. Before you need to change the blade, flip it over once to use the second side.

Concealed blade
The SECUMAX 350 is a smart cutter. It’s fitted with a double-sided over-moulded blade, the noses have the perfect length to protect. The two cutting edges are wide enough to safely and effortlessly cut 2-ply cardboard.

Spare blade in storage
Blade change is easily and safely executed. Look for the arrow and follow its lead. Open the blue inner side of the cutter to reveal the spare blade. The mounted blade will simultaneously unlatch.

Light and easy
A cutting heavyweight, but with only 37 grams, this cutter is rather light-weight. Meaning that even high cutting frequencies won’t weigh you down. There’s no need to stress when handling the blade either: a plastic jacket protects your fingers.

Ergonomically shaped
Right handed or left handed? It’s really all the same. The SECUMAX 350 fits perfectly in any hand. Gently arcing outer edges, coupled with suitably located soft-grip and light ribbing make for an ergonomic experience.

Application

SECUMAX 150
NO. 150001.08

Full points in three regards. SECUMAX 150 resolves several issues in one. With its concealed blade, you will never have to worry about injuring yourself or damaging your goods. Thanks to its versatility, you only need the one tool to cut, scrape and split. And with its 24 grams and ergonomic design, the SECUMAX 150 won’t weigh you down with fatigue after a day of cutting. In short: it is the cutting tool you have been waiting for.

3-in-1 blade head
The SECUMAX 150 fits like a glove. It’s so comfortable to hold, that it feels like an extension of your hand. With it you can cut cardboard, split tape, open plastic strapping… you can even scrape residue off surfaces.

Concealed blade
This safety knife doesn’t need a sharp tip to be a smart cutter. The cutting head is flat and relatively small, the two noses on either side are the perfect length to protect, and both cutting edges are wide enough to safely and effortlessly cut 2-ply cardboard.

Clever guide surfaces
Another reason why the SECUMAX 150 can cut through cardboard so easily? The guide surfaces located right at the front of the cutter help you to cut on an angle. Angled cutting means less material resistance!

No blade change
The SECUMAX 150 is a disposable cutter. The blade can neither get lost nor injure you during blade change. You won’t change the blade! When the time has come, simply drop the cutter into a sharps container.

Ergonomically shaped
Right handed? Left handed? It’s really all the same. The SECUMAX 150 fits perfectly in any hand. Gently arching outer edges, coupled with light ribbing and a low weight, ensure an ergonomic experience.

SECUMAX 150
NO. 150001.08

Installed blade
The blade is moulded into the body of the cutter and cannot be changed. Blade thickness 0.30 mm

ALL VARIANTS

SECUMAX 150 loose (10 in multipack)

No blade change, blade thickness 0.30 mm
SECUMAX EASYSAFE
NO. 121001.02

It's all easy. It's all safe.
The SECUMAX EASYSAFE convinces with its special features. The prominent and pointed nose of the cutting tool easily pierces plastic sacks and foil-wrapped pallets. The concealed blade easily cuts the sacks and foil. An integrated plastic material-guide makes cutting thin film and paper sheets easier; even individual layers won’t jam. And thin textiles and plastic strapping? No problem for the concealed blade!

For people and goods
The concealed blade provides reliable protection to you and your goods. And your company? It benefits too, naturally. Productivity is high when everything goes smoothly.

4-times usable blade
Why do you benefit more from your blade? With its four sharp edges, it can be rotated four times. That’s why. The result? Blade life is quadrupled and you stay sharp for longer.

Ergonomic handle
Your cutting tool never leaves your hand? Then it is even more important that it is as comfortable as possible, and that it causes as little fatigue as possible. The ergonomic handle is designed with you in mind.

Lockable blade
This cutter is lockable. With a specially shaped key, you can lock it, and thereby prohibit blade change. This is a particularly interesting feature for all conscientious work places.

For packaging tape
You might be wondering what the small metal plate on the top side of the SECUMAX EASYSAFE does... Try it out! Fasten the plate against the tape of a taped box, apply enough pressure to piece the tape, and slice!

SECUMAX COMBI
NO. 109137.02

Combines performance with safety.
The SECUMAX COMBI is our best weapon for defeating all types of packaging film. Stretch film, shrink film or wrapping film? Thick or thin? Anything you need to cut. And the concealed blade means it can come neither close to you nor your goods. This is what we call "maximum safety". Besides from film, you can cut plastic strapping band, leather and with the right blade, even safety belt.

Safety first
The concealed blade protects you and your goods. The long, rounded nose guides you as you cut. All in all, cutting with the SECUMAX COMBI is a safe and precise event.

4-times usable blade
Increase the time of the blade by using all four sharp corners, one after another. In this way, you can minimize costs while ensuring your cutter performs consistently.

Ergonomic handle
Handle every job with ease! The ergonomically shaped handle of the SECUMAX COMBI helps you to work quickly and effectively.

Tool-less blade change
When the time comes, you can change your blade easily and safely. Manually loosen the screw holding the blade cover shut, open the cover and take out the blade. Rotate or replace to the blade, and continue cutting.

For packaging tape
The SECUMAX COMBI is a cutting tool with many excellent properties, including the ability to effortlessly split adhesive tape. Use the integrated small metal plate located at the head of the tool for best results.

SECUMAX NOVEX
NO. 539.00

Wide blade access. Wide range.

You need a strong tool to cut strong packaging film. The SECUMAX NOVEX is strong. And safe. Its concealed blade ensures maximum user safety. This cutter can handle thicker materials like fleece or felt. Plastic strapping band, leather, and even safety belt for example, are no obstacle for the SECUMAX NOVEX.

Longer use
Plastic doesn’t always mean plastic. In the SECUMAX NOVEX it is particularly abrasion resistant. Both the handle and blade head benefit from this. And, of course, you as the user.

4-cutting edge blades
Ever seen this before? Your quality blade has four sharp cutting edges that you can use one after the other. You can therefore clearly benefit from your blade for longer.

Flexible handling
No matter whether you are left or right handed: The SECUMAX NOVEX has been shaped to fit in any hand. For high cutting frequencies too, if necessary.

Eyelet for fastening
Small hole, large effect. Use the practical eyelet to put a strap on your cutting tool. Now you can hang it up in a place where you can always find it.

SECUMAX OPTICUT
NO. 437.00

Glides over the material. And right through the middle.
For “push” cutting.
You are looking for a film and foam cutter that effortlessly
cuts harder and stronger film? One that’s not afraid of stub-
born foam? You have found the best possible solution with
the SECUMAX OPTICUT. Its Teflon-coated, metal foot makes
it both extremely abrasion resistant and easy to slide. Glide
with jam less ease through whatever material you want to
cut. Ideal for “push” cutting.

4-times usable blade
Before you need to
change your blade, you
have the option of rota-
ting it multiple times. Four
times to be precise. In this
way, you can get so much
more out of your blade.
Practical for you, favoura-
ble for your company!

Work ergonomically
It’s easy to work ergono-
mically with the SECUMAX
OPTICUT. Your fingers
will be delighted with the sizable grip, your thumb
with the additional curving at the front of the handle.
Glide cutting couldn’t be
more comfortable.

Cut clean
Whether cutting foam or
film, the bendable plastic
material-guide reliably
stops material jamming in front of the blade. The
same guide simultaneously
protects your fingers from blade contact.

Extremely robust
The glide foot, made of
Teflon-coated metal, is
both durable and robust.
The foot and the similarly
robust handle are firmly
screwed together; you will
be sure to enjoy your cut-
ting tool for an extended
period of time.

Easy blade change
Blade change is performed
using the small, rotating bracket found on the cut-
ter side. Swing, press and release the guide foot.
The blade is housed within the foot. Replace or rotate the
blade before pushing every-
thing back into place.

NO. 436.00

Gildes over the material. And right through the middle. For “pull” cutting.
You are looking for a film and foam cutter that effortlessly cuts harder and stronger film? One that’s not afraid of stubborn foam? You have found the best possible solution with the SECUMAX OPTICUT. Its Teflon-coated, metal foot makes it both extremely abrasion resistant and easy to slide. Glide with jam less ease through whatever material you want to cut. Ideal for “pull” cutting.

Work ergonomically
It’s easy to work ergonomically with the SECUMAX OPTICUT. Your fingers will be delighted with the sizable grip, your thumb with the additional curving at the front of the handle. Glide cutting couldn’t be more comfortable.

Cut clean
Whether cutting foam or film, the bendable plastic material guide reliably stops material jamming in front of the blade. The same guide simultaneously protects your fingers from blade contact.

Extremely robust
The glide foot, made of Teflon-coated metal, is both durable and robust. The foot and the similarly robust handle are firmly screwed together; you will be sure to enjoy your cutting tool for an extended period of time.

Easy blade change
Blade change is performed using the small, rotating bracket found on the cutter side. Swing, press and release the guide foot. The blade is housed within the foot. Replace or rotate the blade before pushing everything back into place.

Further information from page 128 onwards.
A well rounded knife. For paper and foil.

A paper and foil cutter that guides the cutting material itself? Meet the SECUMAX SNITTY. Its integrated plastic material-guide guides thin material in the direction of the blade, smoothing out bumps and preventing jamming. The 4-times usable blade lays at a 45° degree angle to the cutting material. An optimal angle for easy cutting.

Practical assistant
The SECUMAX SNITTY is small, light and handy. Its round handle sits on a sliding base, which is slanted at the front. This makes access to individual paper and foil layers easier.

4-cutting edge blades
Your safety knife is fitted with a 0.2 mm thin quality blade. You can turn it and turn it around many times – and thus quadruple your usage time. It’s worth it for you.

Changing blades - easy and safe
The blade carrier is integrated into the handle. You just have to pull it out to change the blade - and the old blade is ready to change. The rough surface of the blade carrier makes handling it easier.

Left and right
The SECUMAX SNITTY fits into every hand. Yours too. The rounded plastic handle does not differentiate between left and right. Try it out and see!
Adjustable cutting depth. You choose!
Paper, film, foam? Not a problem at all! But wait, there’s more! The SECUMAX MOBILEX is the only safety knife with a concealed blade and an adjustable cutting depth. Make blade access larger or smaller by setting the in-built cutting depth adjuster. Set a depth as low as 2 mm, or as great as 10 mm. It all depends on your requirements and the size of the material you need to cut.

Application

Make way for the specialist.
An expert in cutting flat paper and plastic sheets? You’ve found it in the handy SECUMAX COUPPY. Its concealed blade lies at a 45 degree angle to the cutting material. An optimal angle for easy cutting. A flat, clean base allows the safety knife to slide smoothly. The cleverly rounded head of the cutter intuitively guides the cutting material towards the blade.

SECUMAX ZEPHER
NO. 336.02

Up to 40 in one sweep.
The SECUMAX ZEPHER stands out, in every respect. Due to its size, its design, and the way it is used. What other cutter can cut up to 40 layers of plastic film at once? Or paper layered to a similar thickness? The wedge shaped metal cutting foot makes it so easy to cut into a roll of material. And easy to keep the cut rolling. The blade is concealed for your protection.

SECUMAX SHEETING CUTTER
NO. 335.00

Confidently cuts through the layers.
Designed for the purpose of cutting back top layers from paper and film rolls, the SECUMAX SHEETING CUTTER is aptly named. And with its strong profile, ergonomic shape and concealed blade, it lives up to its calling. Unlike the SECUMAX ZEPHER, you can cut only a few layers at a time. But because the head is so narrow, it follows the blade easily through the material, making cutting efficient.

SECUMAX POLYCUT
NO. 85000.00

Pokes its nose into everything.
The SECUMAX POLYCUT is another of our small, plastic disposable cutters. Not to be overlooked, this cutter is a proud member of our product range. Its extra-long and pointed nose makes it very special indeed. Try using it to open a letter. Or to cut film bridging a narrow channel, for example when splicing. The SECUMAX POLYCUT makes tasks such as these a breeze. That this tool is comfortable to use goes without saying.

It’s all protected
The quality blade is safely embedded between the nose and the handle. So it only cuts what you really want to cut. And there is no risk to your goods while doing so.

No blade change
The SECUMAX POLYCUT is a disposable cutter. Since you do not have to change the blade, neither you nor your staff can come into contact with it. An additional benefit as far as safety is concerned.

Long, pointed nose
Why the extra long and pointed nose in the SECUMAX POLYCUT? Because you can place it particularly well in the spaces in between. The cutting material is also led to the blade in a much more reliable way.

Technical features
- Main cutting materials: glass fibre reinforced plastic
- Installed blade: The blade is moulded into the body of the cutter and cannot be changed. Blade thickness 0.30 mm.
- Applied blade: the stainless steel blade is moulded into the body of the cutter and cannot be changed. Blade thickness 0.30 mm.

SECUMAX PLASTICUT
NO. 3469.08

Doesn’t rest. Doesn’t rust.
The SECUMAX PLASTICUT is different from the other products in our range but only in the detail. But you know: that’s what often matters most. This flexible disposable cutter is best used for thin film and paper. Due to its width of just 3 mm, cutting protective film stretched over a thin gulley as between door and pillar on a new car is also possible. The blade is made of stainless steel, the cutting edge is TiN-coated. And: the SECUMAX PLASTICUT is perforated - in case you want to add additional fittings later on.

PRODUCT DETAILS

- Knife size (L x W x H): 75 x 3 x 44 mm
- Main material: Plastic
- Weight: 6.3 g
- Weight per unit (loose): 6.3 g

SECUMAX POLYPICK
NO. 469.08

Cut film? Easy-peasy.
What the SECUMAX POLYPICK has is best shown by comparison. With a width of 3 mm, it is somewhat thicker than most of our other disposable film cutters. This advantage in stability will help you open film welded pallets for example. Another plus point is its relatively long and pointed nose. It makes piercing into the cutting material easier.

PRODUCT DETAILS

**SECUMAX CARDYCUT NO. 7469.08**

Ventures where others won’t. With stainless steel blade. Funnily enough, the SECUMAX CARDYCUT bears striking resemblance to the two materials it best likes to cut: thin paper and film. With a wall thickness of a miniscule 2 mm, this cutter is one of our most slender. It is also extremely flexible. You can reach places with the SECUMAX CARDYCUT that other cutters just won’t dream of going. Tiny gaps, for example, and narrowest of spaces.

**SECUMAX CARDYCUT NO. 5469.08**

Some clear advantages. With stainless steel blade. You will always gain insight with the SECUMAX CARDYCUT since it is made of plastic that is clear as glass. This makes visual control when cutting film and paper easier. Thanks to its small and compact design, it runs very smoothly, for example, when cutting into curves and in especially narrow slits. As a specialist for thin film it is used frequently in the automobile industry.

Slices anything that’s soft.
The SECUMAX TRENEX is a disposable cutter made of a stab-
le plastic. It’ll efficiently cut an array of different materials, but
does prefer to work with those of a softer substance. Foam,
pipe insulations, perforated film and coarsely meshed textiles
are all materials the SECUMAX TRENEX loves to cut. The tip
of its nose is significantly rounded. This prevents hooking and
tripping. Minor detail, major effect.

SECUMAX 565
NO. 565001.00

The all-rounder. At work and at home.
Our all-purpose tool for professional cutting. Ideal for larger hands – or in case you wear gloves during work. Cardboard, paper, foils, fabrics and much more cannot withstand its powerful cuts. You also have the best protection thanks to the special sharpening and the rounded tips. The wire-cutter facility can be used to cut through wires and cables, and the additional grips integrated in the handle to open caps.

Non-rusting stainless steel
You will be able to use your scissors for a very long time as the metal parts are made from non-rusting stainless steel. The handles have been coated in a plastic reinforced with fibreglass. Another guarantee for a long service life.

Comfortable working
The experts call them "eyes" and these are the two big openings in which you insert your fingers to securely hold the scissors. The "soft-grip" on the insides also helps to ensure comfortable and non-slip working.

Unscrewing grips
Even though the SECUMAX 565 is an allrounder, it is not restricted just to cutting. A cap that you cannot unscrew? Just use the grips embedded in the handle and the problem will be solved in no time at all!

Integrated wire cutter
If you open the scissors a little wider you will be able to use the wire-cutter notch integrated above the screw. Simply slide the wire or cable in place and then cut it to the required length. This notch can also be used for stripping cables.

80% of original size

Sharp, but not dangerous
Take a good look at the cuts. Noticed anything? None of them have been cut at an angle, as all of the cuts are at right-angles. Therefore you cannot cut yourself, only the large range of potential materials.

Thumbs up – for very long cuts.
The SECUMAX 564 is characterized by its thumb opening and its extra-long edge, which also makes an ideal support surface. These safety scissors enable you to completely control your work. Moreover, you need fewer cuts to complete the job of cutting through cardboard, paper, foil, fabric and much more. Highest safety guaranteed by the special sharpening of the cutting blades and the rounded tips.

Sharp, but not dangerous
Take a good look at the cuts. Noticed anything? None of them have been cut at an angle, as all of the cuts are at right-angles. Therefore you cannot cut yourself, only the large range of potential materials.

The experts call them “eyes” and these are the two openings in which you insert your fingers to securely hold the scissors. The “soft-grip” on the insides also helps to ensure comfortable and non-slip working.

Extra-long cutting edges
Fast and controlled – you will cut through easily using the SECUMAX 564 Fast, thanks to the long cutting edges. Controlled, as the entire length from the finger opening to the tip can be used as a support surface.

Sturdy connection
A matter of course for quality scissors: Both of the cutting edges are held together by a real screw. This ensures sturdy connection and permanent high cutting power.

SECUMAX 363
NO. 363001.00

Precise to the millimeter. In many regards.
Our safety scissors for extra fine and targeted cuts. It is playfully easy to direct, using your thumb and forefinger only. And just like its big brothers, the lightweight cuts through cardboard, paper, film, fabrics, yarn and strapping band. Your fingers and hand are protected against injuries by the special way the scissors have been sharpened in addition to the rounded tips.

Short cutting

In brief: this is true precision! This makes the SECUMAX 363 especially suitable for precise, sophisticated cutting. The scissors will not drift away from your line, even when you want to cut in the smallest corners.

Sturdy connection

A matter of course for quality scissors: Both of the cutting edges are held together by a real screw. This ensures sturdy connection and permanent high cutting power.

NO. 363001.00
Fully automatic blade retraction
The intelligent cutting tool: as soon as the blade leaves the cutting material, it withdraws automatically into the handle - without you having to do anything. That’s what we call "a very high degree of safety."
SECUPRO 625
NO. 625001.02

Long lever. Long blade. Long-lasting enjoyment.
The new SECUPRO 625 goes straight to the top position of our list with squeeze-grip knives. Its aspiration is very clear: premium. Because it offers all that professional users require: an aluminium handle, an easy and smooth lever to release the blade, a large cutting depth combined with a very high safety due to the fully automatic blade retraction and a comfortable blade change. All in all, you will know that you have a high-end cutting tool in your hands.

Excellent ergonomics
We have rarely produced a cutting tool before that fits so perfectly into the heavy users hand as the SECUPRO 625. The long and smooth lever, the round shape of the handle and the soft-grip at the back of the knife – it’s more than worth testing it!

Robust and balanced
You can see and feel that the handle is made of high-quality aluminium. Its robust construction goes hand in hand with an optimal weight distribution. Consequently, there’s almost no risk of weakening for tool and user. Not even when cutting very heavily.

Large cutting depth
The long blade extension is ideal for cutting up to 3-ply cardboard boxes, rubber, material on reels and many more applications. The blade can be changed in a few steps – by pushing the blade change button and pressing the lever, it can be easily pulled out.

For many cutting types
The overall package of the SECUPRO 625 is quite unique – and so are all separate features. Even saw cutting is safe – thanks to the protecting blade retraction. And you can enlarge the number of different application areas by simply installing one of the optional blades.

Safe along the line
While you rely on the blade retraction at the front part of the handle, there’s another safety feature built in for even more protection. You can lock the lever and thus avoid that the blade is released unintentionally.

For highest demands.
A cutting tool in which function and design go hand in hand? Meet SECUPRO MARTEGO, our prize winning lockable cutter with fully automatic blade retraction. Get used to the word “very” in its presence: it’s very safe, very robust, very ergonomic, very versatile, and made to very high standards. This cutter is not only suitable for both right and left-handed users, but also for those with larger hands.

Perfect handling
The advantages of the SECUPRO MARTEGO lie in your hands. The curved and lockable housing, the soft-grip for better handling, the “pre-set” cutting edge; these three factors guarantee an ergonomic experience.

4-edged blade
The Solingen quality blade, with its four sharp edges, can be rotated multiple times. It’s worth it! In the meantime, a relatively small cutting depth protects your goods from unnecessary damage.

Change safely
When you need to change the blade, you can do so without any additional tools. Here, the “pull” of the SECUPRO MARTEGO is revealed: the integrated magnet ensures that the blade cannot fall out.

Everything under control
It’s all about aluminium. The powder-coated metal body does not only contribute to the SECUPRO MARTEGO’s extraordinary design. It credits the cutter with extreme robustness and durability.

Blade lock for extra protection
Your SECUPRO MARTEGO accompanies you on your job at every cut and turn? Glad to hear it. But always press the blue activator when you’ve finished cutting! This way the blade cannot make a surprise appearance.

The SECUPRO MERAK is our practical, lockable cutter with fully automatic blade retraction. With SECUPRO MARTEGO’s "little brother" we have thought about one thing in particular: you. The lightweight and user friendly SECUPRO MERAK lets you work safely, with little risk of cutting exhaustion. And there’s much more: thanks to a shallow cutting depth, your goods are also well protected. No matter what material you cut.

4-times usable blade
One blade, four sharp edges. You clearly get more out of your blade; four times more in fact. Rotating the blade allows you to cut with a constant cutting force, all the way through your work day.

Safe blade change
You can change your blade without any additional tools, and without dismantling the SECUPRO MERAK. You have nothing to lose: an integrated magnet prevents the blade from falling out.

Light and stable
A particularly abrasion resistant plastic has been used for the SECUPRO MERAK. Nevertheless, it has a comfortable weight. Your cutting arm is protected from fatigue, and your cutter from wear and tear.

Press for safety
You can prevent unintentional blade activity by activating the small blue blade lock. Simply press against the pictured lock to protect yourself from injury whenever your cutter is stationary.
SECUPRO MEGASAFE NO. 116006.02

Quality that’s visible.
Would you like to have a safety knife with a large blade extension? Or are you looking for a worthy replacement for either OPTISAFE or MAXSAFE? In both cases, the SECUPRO MEGASAFE is your top choice. Thanks to a cutting depth of up to 17 mm, this cutter doesn’t shy away from a challenge. And no matter your task, safety is always guaranteed; the fully automatic blade retraction functions even when you decide not to extend the blade. Rounded blade tips round off the package.

Robust handle
The body of our top quality SECUPRO MEGASAFE is 100% aluminium. And ultimately, 100% robust. You can master all manner of standard cutting materials with this cutter. Even multi-layered ones.

Change without opening
Blade change is easy and safe. Simply push down on the back end of the rocker device located on the topside of the cutter, and push the slider completely forward. The blade is ready for changing.

Perfect handling
The lightly rounded handle fits particularly well in your hand. Your thumb doesn’t get a raw deal either: soft grip on the slider makes for a pleasant, slip-resistant resting pad.

Double-sided slider
With the right hand? With the left hand? No need to ask this question! The SECUPRO MEGASAFE is fitted with a slider that’s accessible from both sides. Choose for yourself!

Double-edged blade
Before you need to change the quality blade, you have the chance to turn it over once. Usage time of the blade is doubled and fatigue is held at bay: with a simple flip of the blade, your SECUPRO MEGASAFE will cut like new.

ALL VARIANTS
SECUPRO MAXISAFE
NO. 101806.02

Maximum comfort. With a 3-sided slider.

Are you often only satisfied with the maximum? That connects you to the SECUPRO MAXISAFE, our safety knife with fully automatic blade retraction. Thanks to its large blade extension, it masters even 3-ply cardboard boxes - depending on the blade shape attached - but also all other materials such as carpets or foils, for example. It also provides maximum comfort, whether you are right or left handed. Another special feature: the rounded off blade tip.

At the press of a button
Your two hands alone are enough to change the blade. And these short instructions: press the blade change button and swing open the handle. Push the blade carrier to the front and you can change the blade. It’s that easy.

Metal guard
SECUPRO MAXISAFE is not afraid of a little friction. A metal abrasion protection shield, found on the underside of the knife head, works to prevent any general wear and tear as you cut your path through the day.

Double-edged blade
Don’t change your blade the moment the tip turns blunt. Double the usage time of your blades and minimize wastage by always remembering to flip them over. Don’t forget: there are two sides to every blade!

Small eyelet
No one likes to lose his tools. Especially not tools like the SECUPRO MAXISAFE. That’s what the eyelet is for: to safely transport and/or tether your cutter.

SECUPRO MAXISAFE
NO. 101860.02

Maximum robustness. With a 3-sided slider and metal cap. Are you often only satisfied with the maximum? That connects you to the SECUPRO MAXISAFE, our safety knife with the fully automatic blade retraction. Thanks to its large blade extension it masters even 3-layer cardboard boxes, but depending on the blade shape attached also all other materials such as carpets or foils, for example. Its take up qualities also provide the maximum – thanks to the metal cap at the front, on the handle. Another special feature: the rounded off blade tip.

3-sided slider
With the right hand? With the left hand? From the top? Regardless of how you wish to activate the blade, SECUNORM MAXISAFE is totally flexible. Its 3-side slider provides comfortable, variable handling.

At the press of a button
Your two hands alone are enough to change the blade. And these short instructions: press the blade change button and swing open the handle. Push the blade carrier to the front and you can change the blade. It’s that easy.

No abrasion
SECUPRO MAXISAFE is not afraid of a little friction. A metal abrasion protection shield, found on the underside of the knife head, works to prevent any general wear and tear as you cut your path through the day.

Double-edged blade

SECUPRO OPTISAFE
NO. 100145.02

In many ways the ideal solution.
Optimize your workplace with the SECUPRO OPTISAFE. With its 4-edged blade and metal reinforced chin you can be sure of durability and efficiency. This cutter, with its double-sided slider, is suitable for both left and right-handed users, while its general shape and size promotes ergonomic handling for all. And its relatively small cutting depth? Might not be suitable for cutting all types of materials, but is particularly capable of protecting your standard packaged goods.

SECUPRO LEWIS
NO. 710000.02

Worried about cutting your fingers? Put a cap on your fears.
As you have surely already noticed, the SECUPRO LEWIS is different. But in a positive sense! Unlike with other cutters, the blade doesn’t retract upon exiting the cutting material. Instead, a protective cap falls down in front of the blade, reliably shielding you from any sharpness. Even if you keep the slider pressed down. As an added bonus, the SECUPRO LEWIS allows you to choose between two cutting depths.

SECUPRO PROSAFE
NO. 01152.02

High performance with a flick of the wrist.
The SECUPRO PROSAFE is a safety knife that likes to move. And achieve. With a controlled flick of the wrist you activate the blade. With a similar movement, one that automatically occurs when you pass the edge of the material being cut, the blade disappears. Get down to business and you’ll learn all about this cutter’s ability. Extremely stable, the SECUPRO PROSAFE moves through all standard cutting materials with ease – from cardboard to rubber, from leather to foil.

Robust handle
For the most part, SECUPRO PROSAFE consists of aluminium, and is therefore very robust. You can use this cutting tool for all standard cutting applications, and also for cuts requiring the application of extra force.

Easy blade change
You require no tools to change the blade. Simply press the ribbed surface of the blade cover downwards and then slide forwards. Removing the blade cover exposes the blade, leaving it free to either flip or change. Job done!

Double-sided blade
Before you need to change the quality blade, you have the chance to turn it over once. Usage time of the blade is doubled and fatigue is held at bay: with a simple flip of the blade, your SECUPRO PROSAFE will cut like new again.

Right and left
The blade of the SECUPRO PROSAFE is activated by a flicking movement of the wrist. There is no slider and therefore it really doesn’t matter whether you are left or right handed.

Wide blade slot
The blade retracts into the housing with the same flicking movement required for activation. You can be confident of the blade reliability disappearing, thanks to theleness of the blade opening. Cutting material will not build-up and hinder blade retraction.

SECUPRO CUT-O-MATIC
NO. 438.02

Safety, efficiency? It’s all in the hook!
This cutter, with its paper tearing hook, is all about... you
guess it: paper! You wish to slab back the remaining layers of
paper, left on a roll? Or do you need to remove damaged layers?
Let the SECUPRO CUT-O-MATIC be the answer to your needs.
Its polished hook blade is perfectly capable of tearing through
strong paper types. As an additional plus, cutting depth can
be set by accordingly manipulating the screw found on the
underside of the cutter body.

Particularly robust
Something you will auto-
matically recognize with the
SECUPRO CUT-O-MATIC
is that it’s been designed to meet the highest de-
mands. With its solidly
built handle, and protec-
tive metal bracket, expect
your cutting material to show this cutter respect.

Easy blade change
Blade change is so easy it won’t bring you out of
stride. Remove the screw
at the front of the handle
and swing back the protec-
tive bracket. Carefully take
out the hook and replace it
with a new one.

Firm grip
Even if you are wearing
gloves, there is no slipping
and wobbling involved with the
SECUPRO CUT-O-MATIC. Its cleverly shaped, large
handle fits perfectly in the
hand. The protective cap
which swings upwards when you cut
has the sec-
ondary purpose of providing extra stability whilst cutting.

The right cut
You only cut where the
hook bites. Your goods
are thereby protected. The
protective metal bracket
automatically falls down
into place the moment you
stop. This is not only good
for your goods, but good
for you!

For right and left handers
Whether you are cutting,
tearing or stabbing, the
SECUPRO CUT-O-MATIC
doesn’t discriminate
between right and left
handers. So go ahead
and be brave.

Automatic blade retraction
Thumbs up for a high degree of safety. As soon as you start cutting, let go of the slider. The blade will disappear into the handle the moment it loses contact with the material being cut.
SECUNORM 380
NO. 380001.02

Our world debut. For special demands.
A long bladed safety knife? This has been a contradiction of terms for a very long time. Until now. The new SECUNORM 380 is the first safety knife worldwide featuring automatic blade retraction AND a blade extension length of almost 8 cm. If you are looking for a low risk alternative to the usual fixed blade cutter, here is your answer. As an additional safety feature, we’ve included a transportation lock, to disable any unintended blade activity.

Long blade extension
With a blade extension of exactly 7.8 cm, the word “long” is somewhat an understatement. This cutter can be used to safely cut 4-ply cardboard, open sacks, separate paper sheets, slab rolls, carve building foam, slice polystyrene slabs… the list continues.

Tool-less blade change
To change the blade, simply follow the arrow. Pressing down on the small blade change activator releases the capping end of the cutter, allowing it to swing downwards, and ultimately allowing you to remove the blade carrier and blade.

Ergonomic handle
It goes without saying, the more ergonomic the handle, the easier it is to cut. The SECUNORM 380 with its curved shape, carefully positioned soft-grip and ribbed slider, is an ergonomic dream.

Particularly robust
The core of this cutter is a particularly stable and abrasion resistant metal rail. The body of the cutter is made from a high grade plastic, capable of fulfilling high expectations.

For right and left handers
Right and left handed users alike can be charmed by the new SECUNORM 380. Turn the blade 180° according to your preference and to suit your needs. The eyelet at the end of the cutter is also great for whenever you want to attach your SECUNORM 380.

SECUNORM PROFI40
NO. 119001.02

Deep cut. High quality.
Just like the other PROFIs, SECUNORM PROFI40 is a professional cutting tool. Particularly when it comes to cutting open all different types of sacks. Some cutting tasks demand a decent blade length. And for these tasks especially, SECUNORM PROFI40 with its 40 mm blade length is your answer. The cutter is robust, the blade resistant to breakage. If you are a left hander, turn the blade 180° and you’re ready to cut!

Long, stable blade
What does this cutter have over a standard version? The SECUNORM PROFI40 houses a blade that distinguishes itself with its impartialness to snapping. Ideal e.g. for opening sacks and for cutting paper from the reel.

Abrasion resistant
The plastic insert of the SECUNORM PROFI40 slots into a fully aluminium body. With its robust design, this cutter can cope with high cutting frequencies over an extended period of time.

Tool-less blade change
Blade change is easy to understand. Easier still to perform. Simply push the plastic insert out of the handle and with care, replace the blade.

For right and left handers
The SECUNORM PROFI40 is the right size for every hand. Yours too. If you are a left hander, turn the blade 180° and your cutting tool is ready to use.

ACCESSORIES

APPLICATIONS

PRODUCT FEATURES NO. 119001.02
Professional in every respect.

Our SECUNORM PROFI25 is aptly named “PROFI” because this cutter really does behave professionally. Whatever the situation, whatever the cutting material. And the “25” is in reference to its impressive blade extension of 25 mm, with which even 3-ply cardboard can be conquered. And just like all other members of the PROFI family, SECUNORM PROFI25 features automatic blade retraction.

**Double-sided blade**
Before you need to change the quality blade, you have the chance to turn it over once. Usage time of the blade is doubled and fatigue is held at bay: with a simple flip of the blade, your SECUPRO PROFI25 will cut like new again.

**Tool-less blade change**
Blade change is easy to understand. Easier still to perform. Simply push the plastic insert out of the handle and with care, either rotate or replace the blade.

**For right and left handers**
The SECUNORM PROFI25 is the right size for every hand. Yours too. If you are a left hander, simply turn the blade 180° and your cutting tool is ready to use.

SECUNORM MULTISET
NO. 118001.02

Many cutting tools in one.
The SECUNORM MULTISET is a respected member of our legendary PROFI family. It adopted the name "MULTISET" due to its unique property: a multi-set-able blade length. Ultimately, it's up to you to decide how long the blade should extend: 5, 9, 14, 19, 25 mm, the options are multiple. Depending on your needs, you can adjust the blade length. Your needs change? SECUNORM MULTISET can change with you!

Flexible cutting depth
What does the SECUNORM MULTISET have that other cutters don't? A locking screw with which you can adjust blade extension infinitely up to 25 mm in other words, the SECUNORM MULTISET can be easily and adapted to perfectly meet individual needs.

Abrasion resistant
The plastic insert of the SECUNORM MULTISET slots into a fully aluminium body. With its robust body and replaceable insert, this cutter can cope with high cutting frequencies over an extended period of time.

Double-sided blade
Before you need to change the quality blade, you have the chance to turn it over once. Usage time of the blade is doubled and fatigue is held at bay: with a simple flip of the blade, your SECUNORM MULTISET will cut like new again.

Tool-less blade change
Ready, set, blade change! Changing the SECUNORM MULTISET blade is quickly done. Simply push the plastic insert out of the handle and either rotate or replace the blade.

For right and left handers
The SECUNORM MULTISET is the right size for every hand. Yours too. If you are a left hander, simply turn the blade 180° and your cutting tool is ready to use.

SECUNORM PROFI LIGHT
NO. 123001.02

The particularly light heavyweight.
The SECUNORM PROFI LIGHT is a PROFI off-spring. With its plastic body, it is lighter than the others by several grams. But as far as cutting ability is concerned, it’s a heavyweight. You can use this cutter for almost all purposes. A relatively large blade length makes it suitable for cutting all common materials. For an indefinite number of cuts. And for special requirements, considering the handle can accommodate various types of blades.

No abrasion
The SECUNORM PROFI LIGHT is made of a particularly abrasion resistant plastic. Stability and durability are the result of thoughtful design. Award-winning design, as a matter of fact.

At the press of a button
Changing the blade is simple. Press the blade change button and pull the plastic insert out of the cutter body. Change the blade, job done!

Double-sided slider
With the right hand? With the left hand? There’s no need to ask this question! The SECUNORM PROFI LIGHT is fitted with a slider that’s accessible from both sides. Choose for yourself!

Ergonomically light
The SECUNORM PROFI LIGHT is ergonomically shaped, as are all members of the PROFI family. It is however the lightest of the group. With its 43 grams, this cutter is also ergonomically light, making high cutting frequencies easy.

Double-sided blade
Before you need to change the quality blade, you have the chance to turn it over once. Usage time of the blade is doubled and fatigue is held at bay: with a simple flip of the blade, your SECUNORM PROFI LIGHT will cut like new again.

SECUNORM PROFI
NO. 07152.02

A classic. For right handed users.
Do you sometimes wonder why we’ve never bothered to update our SECUNORM PROFI? After all, it is four decades old! Well to be honest, it has never been necessary. Yesterday’s pioneer is today’s classic. A timeless shape, a robust form, a versatile ability: what more could you want? The “forefather” of all of our TÜV-tested safety knives, the SECUNORM PROFI features automatic blade retraction and has therewith protected generations of users.

Ergonomic handle
Why has the SECUNORM PROFI been so popular for as long as we know? Because, for one, it sits comfortably and valuably in your hand. You can thus complete even demanding cutting work without any fatigue.

Hard to take up
The plastic insert of the SECUNORM PROFI is inside an aluminium handle. The stable design makes it ideal for high cutting frequencies and a long life.

2-cutting edge blade
Before you have to change the quality blade, you can turn it over once. This doubles the usage time of the blade - and reduces your energy consumption. Because your product will cut again like new.

Without tools
You can kiss goodbye to complex blade changes, in the truest sense of the word. You only have to push the plastic insert out of the handle and exchange the old blade for a new one.

Safe fit
A SECUNORM PROFI will not let you down. But it can be hung down! Just pull the strap through the eyelet and let the cutting tool hang from your wrist or belt loop.

SECUNORM PROFI
NO. 07152.02
SECUNORM PROFI NO. 07105.02

A classic with a shorter blade extension. For right handed users.

The SECUNORM PROFI is the “grandfather” of all our TÜV-certified safety knives. Once upon a time it was a pioneer. Today it is a classic. The SECUNORM PROFI with a smaller cutting depth is available for both left and right-handed users. But why the smaller cutting depth? With less blade, you can better protect your goods. Depending on which PROFI variant you choose, your cutting depth will be limited to 5, 7, 9, 10, 12 or 14 mm. The SECUNORM PROFI shown here features a 5 mm slider.

To protect your goods
You don’t have to come too close to your goods with the shortened blade of the SECUNORM PROFI. You can concentrate fully on your work, without having to constantly look out for the cutting depth.

Ergonomic handle
Why has the SECUNORM PROFI been so popular over the years? Because it fits pleasantly in your hands. Even in the left hand. You can complete even the most demanding cutting jobs without getting tired.

Hard to take up
The plastic insert of the SECUNORM PROFI is inside an aluminium handle. The stable design makes it ideal for high cutting frequencies and a long life.

2-cutting edge blade
Before you have to change the quality blade, you can turn it over once. This doubles the usage time of the blade - and reduces your energy consumption.

Without tools
You can kiss goodbye to complex blade changes. In the truest sense of the word. You only have to push the plastic insert out of the handle and exchange the old blade for a new one.

More leverage, more performance.
The slimline SECUNORM MIZAR is your gateway into our world of quality squeeze cutters. Instead of a slider, a lever is responsible for releasing the blade. Squeeze and cut. Thanks to a relatively large cutting depth, you can use this cutter to cut all common cutting materials. Efficiently. Its slender, no-fuss form, simultaneously allows a wide variety of cutting styles.

Ergonomically shaped
Right-handed? Left-handed? It makes no difference with the SECUNORM MIZAR. Its ergonomically designed, lockable squeeze grip comfortably fits all hands.

Plastic with a content
A glass fibre content, to be precise. These fibres are what make the SECUNORM MIZAR super strong and super solid. The durability of this cutter is remarkable.

Easy blade change
No tools are needed to change the blade. Two hands can do the job. Move the 3-in-1 activator to position “blade change”. Swing out the lever, flip the blade cover, replace the blade. Close the cover, store the lever, continue cutting!

Multipurpose locking function
The SECUNORM MIZAR 3-in-1 activator is unique. Slide it to lock and unlock your cutting tool. And when necessary, move it to position 3 to safely change or rotate the blade.

Double-sided blade
Before you need to change the quality blade, you have the chance to turn it over once. Usage time of the blade is doubled and fatigue is held at bay: with a simple flip of the blade, your product will cut like new.

Surprisingly comfortable, incredibly capable.
The SECUNORM 175 enriches our range of popular small box cutters. Its unique features include the cleverly-designed and incredibly easy blade change system. Other highlights include its ergonomic handle, double-sided slider and a fresh design. The SECUNORM 175 is a versatile cutting tool that apart from cardboard boxes, also masters bags, films and strappings.

4-times usable blade
Why do you benefit more from your blade? With its four sharp edges, it can be rotated four times. That’s why. The result? Blade life is quadrupled and you stay sharp for longer.

Easy blade change
Once again we’ve improved blade change. Simply press against the blade change button and pull to open the handle. The slider automatically folds up, revealing the blade. Rotate or change and continue cutting.

Double-sided slider
The SECUNORM 175 is user friendly in the best sense of the word. And with its double sided slider, it is suitable for both, right and left handed users. No modification required.

Practical eyelet
A cutting tool as handy as the SECUNORM 175 fits in your pocket. Mostly! To make your cutter available even faster, you can pull a strap through the eyelet. And hang it around your wrist, for example.

SECUNORM HANDY
NO. 445.02

A classic, in pocket form.
The SECUNORM HANDY is compact, but don’t be fooled! Being handy doesn’t mean it’s quaint. This is a cutting tool with “bite” and all the qualities required for the job. Compact yet versatile, lightweight but extremely handy, the SECUNORM HANDY is suitable for a variety of cutting applications. High frequency cutting is no problem.

4-times usable blade
Why do you benefit more from your blade? With its four sharp edges, it can be rotated four times. That’s why. The result? Blade life is quadrupled and you stay sharp for longer.

Double-sided slider
With the right hand? With the left hand? It’s all the same. We have fitted the SECUNORM HANDY with a slider that is accessible from both sides. Now that’s handy!

Small, but robust
Don’t take this cutter at face value. It is small, but it is tough. The plastic insert sits snug within a coated metal handle. Light and compact, the SECUNORM HANDY will guide you through thick and thin, long term.

Handy format
The SECUNORM HANDY can slip into every pocket. For times when it’s not in use. When in use, you will appreciate its lightness and size. Ribbing on the slider is a grippy bonus.

Tool-less blade change
Changing the blade is simple. And tool-less. Simply pull the plastic insert out of the cutter body. Rotate or change the blade, replace the insert, job done!

SECUNORM SMARTCUT
No. 110000.02

Yes, a cutting tool can be this SMART.
Make one cut with this knife and you’ll know immediately why it’s called a SMART cut. Its light and compact shape is SMART. The fact that it is suitable for almost all types of cutting material is SMART. Automatic blade retraction in such a small housing is SMART. Its immense popularity as an attractive commercial cutter definitely proves its SMARTness.

One use, two advantages
The SECUNORM SMARTCUT is a disposable cutter. For you, that means: no risk of injury when changing the blade. The blade will also not get lost in the production process.

Slider on both sides
With the right hand? With the left hand? This question does not arise. Because we have fitted the SECUNORM SMARTCUT with a slider that is accessible from both sides. Choose for yourself!

Light and easy
At only 17 g, the SECUNORM SMARTCUT is a genuine light weight. This also contributes to quick and efficient cutting without hands and arms getting tired.

Perfect handling
The product does not only look handy. Its small, rounded handle really does sit comfortably in your hand. And there’s much more: So that your thumb doesn’t slip, the slider has grooves.

You can’t lose it
As compact as the SECUNORM SMARTCUT is - there is an eylet for tethering the cutter to you or the workstation.

A gentle cutter with a great shape.
Do you wear protective gloves at work? Are you looking for a cutting tool that sits firmly and safely in a gloved hand?
With a curved slider and an ergonomic shape, the SECUNORM GENIAL is what you’re looking for. Cut multi-layer cardboard boxes, film, plastic strapping band, and much more, without your arm tiring and pace slowing. If necessary, feel free to mount a hook blade.

Easy blade change
The SECUNORM GENIAL blade is so easy to change, it is genius. Open the blade cover, which acts as one half of a double-sided slider. Remove the old blade, and replace with a new. Close the blade cover. Finished!

For left and right handers
Cut with the left hand? Cut with the right? Don’t worry! The two-sided slider ensures that both left and right handers can work with the SECUNORM GENIAL. Remove the old blade, and replace with a new. Close the blade cover. Finished!

Robust design
You can feel the quality when you take the SECUNORM GENIAL in your hands. No wonder, the handle is 100% aluminium. It also has a very stable design. You therefore benefit longer from it.

Ergonomically shaped
Have you noticed that the SECUNORM GENIAL handle is especially curvy? It fits into your hands in the best possible way. Even if you have to wear protective gloves.

Small eyelet
The SECUNORM GENIAL eyelet is small, but fine. Pull a strap through it and attach your cutting tool however and wherever you want to, so that it is always handy.

SECUNORM MULTISAFE
NO. 08152.02

Simply Heavy Metal.
The SECUNORM MULTISAFE made of zinc is an “evergreen.” Or “everblack,” to be exact. Its excellent durability is thanks to its uncomplicated, robust design. With its notable blade extension, you can cut all standard materials. Should you have any particular requirements, you can re-fit the SECUNORM MULTISAFE with one of our many optional blades.

Robust design
As you can see and feel, the SECUNORM MULTISAFE is extremely stable. And flexible, since you can use a large number of blade shapes. This product is therefore suitable for many cutting applications.

Made of solid metal
The SECUNORM MULTISAFE is a tool that seems to be made of one casting. Zinc die casting, to be precise. For certain industries, e.g. the food industry, the product is also available unpainted.

Slide on top
With the right or with the left hand, you ask? Left and right, is the answer! The metal slider is on top of the handle. And can thus be easily used with either thumb.

2-cutting edge blade
Before you have to change the quality blade, you can turn it over once. This doubles the usage time of the blade—and reduces your energy consumption. Because your SECUNORM MULTISAFE will cut again like new.

Eyelet for fastening
Even though the SECUNORM MULTISAFE is now a classic—we had already introduced an eyelet for tethering your cutter to you or a work station.

SECUNORM REGELSAFE
NO. 14152.02

Completely metal. Completely reliable.
The SECUNORM REGELSAFE is nothing less than its “heavy brother”, the SECUNORM MULTISAFE. It is just made of a lighter aluminium. The lighter weight knife ensures lower fatigue during frequent cutting throughout the shift. The slender and robust safety knife is also suitable for all the usual cutting materials. This is also because the dimensions of the blade extension are so generous.

Robust design
As you can see and feel, the SECUNORM REGELSAFE is extremely stable. And flexible, since you can use a large number of blade shapes. The product is therefore suitable for any cutting application. Except power cuts.

Made of all metal
The SECUNORM REGELSAFE is a tool cast as one. Abrasion-resistant aluminium, to be precise. For certain industries, e.g. the food industry, this product also exists unpainted.

Slider on top
With the left hand or the right hand, you ask? With both! The metal slider is on top of the handle, and so can be easily used by both thumbs.

2-cutting edge blades
Before you have to change the quality blade, you can turn it over once. This doubles the usage time of the blade - and reduces your energy consumption. Because your SECUNORM REGELSAFE will cut again like new.

Eyelet for fastening
Even in the case of a classic, such as the SECUNORM REGELSAFE you do not have to do without a practical eyelet. So that you can always attach your cutting tool easily and safely.

From page 144 onwards.
It’s all in the name.
Glace at the SECUNORM POWERCUT and you’ll know directly what it’s made for: power cutting! This tool can be fitted with various different 0.63 mm thick blades, enabling you to fully benefit from its power, regardless of cutting task. To minimise the force output required from the user himself, the cutter is designed to fit in your fist in the most ergonomically way possible. This makes cutting noticeably easier.

For high performance
Why can you expect high performance from the SECUNORM POWERCUT? The design is massive, the plastic abrasion resistant, the handle ergonomic and reinforced with metal, that’s why. It’s guaranteed to be your best helper for all power cutting.

For right and left handers
The slider element is essentially fitted for right-handers. Nevertheless, SECUNORM POWER-CUT can be easily adapted to suit left handers. All you need to do is loosen the screw holding the slider in place, remove the slider, and re-affix it on the opposite side.

Double-sided blade
Before you need to change the quality blade, you have the chance to turn it over once. Usage time of the blade is doubled and fatigue is held at bay: with a simple flip of the blade, your SECUPRO POWERCUT will cut like new again.

Two blade thicknesses
Needless to say, the SECUNORM POWERCUT is fitted with a strong blade. Blade strength is of paramount importance when it comes to cutting rubber slabs, thick foils and multi-layered cardboard boxes. Choose between the 0.63 mm blade version and the 0.90 mm version.

Protected from explosions
Important fact! If your SECUNORM POWERCUT falls to the floor, sparks will not fly. In certain industries – in the mining industry for example – this is not only regulation, but vital.

For all variants (for 02103 + 02101)

SECUNORM POWERCUT
1 in single unit box (5 in multipack) NO. 02103.02

Further information from page 128 onwards.
A small step to achieve great things.
Flexible big bags are increasingly used in various types of industries. Despite the many advantages, there is one main problem when working with flexible big bags: how cut open those heavy-weight bags without the contents spilling over you? The solution is...by using this innovation from MARTOR. The SECUNORM 590 is specifically designed for cutting big bags. Additionally, it has various thought-through features, such as the extra-long handle and the automatic blade retraction. To help you work safely.

Dirt resistant
Very few people work in a sterile environment. No problem for the SECUNORM 590. For example, the exchangeable dirt control device ensures that less dust and other foreign objects get into the cutting head.

Robust construction
The middle element is made of stainless steel; all other components are made of a particularly hard plastic. Protection caps on the cutting head and stainless-steel secured screws also contribute to durability and high weather resistance.

Left and right handed
With the left hand or the right? Actually with both! You will need both hands to use the SECUNORM 590. Decide for yourself which hand to use to turn the blade-engaging element, and which hand to use for stabilising. A comfortable grip is the goal.

To cut like new again
Your cutting tool will be exposed to extreme stress. It is, therefore, all the better that you can easily replace the key components. For example, the complete cutting head. Or just a part of it, such as the stainless steel blade or the dirt control device.
Our cutting tools are not only suitable for daily use in the workplace. They can be invaluable in situations that we don’t come across every day. Traffic accidents, for example: our concealed-blade SOS cutters can assist in cutting safety belts and removing clothing.
SECUMAX SALVEX SOS
NO. 538.02

First-aid cutter and hammer in one.
In the event of an accident, it’s paramount that you react quickly and calmly. An intuitively operable first-aid cutter with multiple uses can be a lifesaving tool. Use the SECUMAX SALVEX SOS to smash the side-window of a crumpled car. Use the concealed blade to cut through seat belts and other trapping materials, and finally, to quickly open clothing. Being able to help is a great thing!

Especially robust
The SECUMAX SALVEX consists of robust plastic and is therefore robust and up for the job. So you can always rely on it for emergencies. And that too, for a long time.

Hammer included
Your first-aid cutter will not even be stopped by safety glass. Use the integrated emergency hammer made of specially hardened steel to smash window and side panes.

4-cutting edge blades
Since the blade has four sharp edges, you can turn and turn it over several times. Thanks to the constantly “fresh” blade, a perfectly functioning cutting tool is available to you in emergency situations.

For right and left handers
There are situations in which every second counts. That’s why the SECUMAX SALVEX is always ready for use. The question of whether you are right or left handed does not arise, as it fits into any hand.

Eyelet and holder
Very important: you have your first-aid cutter with you. Also important: you can always find it again quickly. That’s why the SECUMAX SALVEX not only has an eyelet for attaching, but also a separate holder for the car.

At your side in an emergency.
Safety belts are important for survival. They can however be a hindrance in the aftermath of an accident. They can trap injured people in dangerous situations. The SECUMAX SOS-CUTTER provides the perfect solution. You can use it to reliably cut through any safety belt, whether as a doctor, paramedic or accident witness. The safety knife is also suitable for cutting through clothing, which in some cases also has to be removed.

- INDUSTRIAL BLADE 0.30 mm, stainless, 10 in transparent packaging
- INDUSTRIAL BLADE 0.30 mm, stainless, 920 blades (each paper-wrapped)
Tout particulièrement dans l’industrie alimen-
taire ou pharmaceutique, vous voulez éviter
que des corps étrangers se retrouvent acci-
dentellement dans le processus de fabrica-
tion. Vous pouvez réduire ce risque lors de la
coupe en utilisant nos couteaux de sécurité
identifiables par les détecteurs de métaux.
SECUMAX COMBI MDP
N° 109737.02

Combine performance et sécurité. Identifiable par les détecteurs de métaux.
Le SECUMAX COMBI bénéfice de nombreux avantages qui vous facilitent le travail. En particulier la version MDP inoxydable. Les couteaux de sécurité métal détectable sont essentiels dans l’industrie alimentaire. Il est également idéal pour découper des films étirable, sacs ou cerclages plastiques.

SECUMAX COMBI MDP
Combinez performance et sécurité. Identifiable par les détecteurs de métaux.

Méthode détectable
Le risque de perdre ou de casser un de ses composants existe. La perte n’est pourtant pas irrémédiable. Grâce au plastique métal détectable, vous le retrouverez instantanément.

En toute sécurité
La lame protégée vous évite les blessures et les détériorations de produits. La longueur de la lame et son guide le long du matériau à découper. Autre contribution à la coupe sûre et précise.

Lame utilisable sur quatre côtés
Pourquoi ne pas utiliser un outil qui vous permet de découper en toute sécurité ?

Conception ergonomique
Un outil de qualité s’adapte à la main de l’utilisateur. Et non l’inverse. C’est pourquoi le manche du SECUMAX COMBI MDP a fait l’objet d’une conception ergonomique soignée. Pour un travail agréable et efficace.

Sans outil
Le moment venu, vous changez la lame simplement et en toute sécurité. Il suffit de desserrer la vis à la main. Ouvrez le manche, changez la lame et reprennez la coupe !

Application
**SECUMAX POLYCUt MDP**

N° 85007.08

Son extrémité s’introduit partout. Identifiable par les détecteurs de métaux. Le SECUMAX POLYCUt MDP fait partie de notre gamme de couteaux jetables maniables. Il y occupe cependant une place à part. Son extrémité est ultra-longue et affinée. Testez-le pour ouvrir une lettre ou couper un film dans une fente étroite et vous constaterez son efficacité. Il est en plastique métal détectable et de ce fait facile à retrouver en cas de perte.

**SECUMAX BAGUE COUPANTE MDP**

N° 307.08

Un petit accessoire pratique. Identifiable par les détecteurs de métaux. Couper tout en ayant les deux mains libres ? Seul le SECUMAX BAGUE COUPANTE vous offre cette possibilité. Avec une telle bague au doigt, vous pouvez découper films, fils, ficelles, etc. Si toutefois vous la déposez : elle est en plastique identifiable par les détecteurs de métaux, ainsi, le risque qu’elle se trouve emportée involontairement dans votre processus de fabrication est réduit au maximum.

« Plus d’informations à partir de la page 127 »
**SECUNORM PROFI25 MDP**
N° 120700.02

Professionnel dans toutes les situations. Identifiable par les détecteurs de métaux.
Le SECUNORM PROFI25 MDP porte bien son nom. Il s’appelle « PROFI » parce que vous disposez d’un outil de coupe pour toutes les matières et coupes courantes. « 25 » indique que le débord de lame est de non moins de 25 mm, ce qui permet de couper facilement même les cartons à trois cannelures. Et « MDP » car tous les composants du couteau de sécurité sont identifiables par les détecteurs de métaux.

**SECUNORM HANDY MDP**
N° 447.02

Le classique au format de poche. Identifiable par les détecteurs de métaux.
Le SECUNORM HANDY MDP est à la fois compact et résistant. Il réunit ainsi toutes les qualités pour un travail efficace. La version MDP est conseillée si vous travaillez dans l’industrie alimentaire ou pharmaceutique. Le plastique identifiable par les détecteurs de métaux et les composants de qualité inoxydable garantissent que le SECUNORM HANDY MDP ne présente aucun danger.
Un outil de coupe vraiment « SMART ». Identifiable par les détecteurs de métaux.
Lorsque vous prenez le couteau de sécurité dans votre main, vous comprenez tout de suite pourquoi son nom commence par ... Son manche est en plastique identifiable par les détecteurs de métaux et sa lame en acier inoxydable. Bon à savoir, non ?

Un test régulier est un gage de sécurité.
Vous disposez pour chaque MDP-KIT de 5 CARTES SOUS SACHET, chacune contenant une bille en plastique identifiable par les détecteurs de métaux dont le diamètre varie de 2,5 mm à 8 mm. Contrairement au KIT DE 5 CARTES EN ACRYLIQUE, les billes sont scellées dans des sachets de polyéthylène.
Accessories are your little assistants. In the best sense of the word. Our accessories can assist you to safely store your cutting tool. To even better protect your fingers. Or to dispose of your used blades in the best possible way.
BELT HOLSTER L WITH CLIP
NO. 9922.08

Application

Everything always at hand: BELT HOLSTER L.
What do you do with your cutting tools when you are not actually using them? The MARTOR BELT HOLSTER L is a robust holder that allows you to carry all large MARTOR cutters as well as our safety scissors at all times. In addition, the interior and exterior pockets are designed to allow you to load different tools: for example, you can carry an extra cutter, a pen and a pack of blades. The MARTOR BELT HOLSTER is the ideal place to stow your tools safely when moving from A to B - and have them at hand, as soon as they are required.

BELT HOLSTER M WITH CLIP
NO. 9921.08

Application

Everything always at hand: BELT HOLSTER M.
The MARTOR BELT HOLSTER M is a robust holder that allows you to carry all mid-size MARTOR cutters as well as our small scissors at all times. In addition, the interior and exterior pockets are designed to allow you to load different tools: for example, you can carry an extra cutter, a pen and a pack of blades.

BELT HOLSTER S WITH CLIP
NO. 9920.08

Application

Everything always at hand: BELT HOLSTER S.
The MARTOR BELT HOLSTER S is a robust holder that allows you to carry all compact MARTOR cutters as well as our small scissors at all times. In addition, the compartments are designed to allow you to load different tools: for example, you can also carry a pen or a pack of blades.

Certified safety
We always design our cutting tools to the highest standards. So why should our accessories be anything less? Our MARTOR BELT HOLSTERS were therefore tested for harmful substances and stability - and were found to be very good.

Does it fit? Fits perfectly
Our MARTOR BELT HOLSTERS S, M and L are precisely tailored for our cutters - and not just that. Depending on the size of the pocket, it allows you to carry a combination of various tools: cutter/pen, cutter/scissors, cutter/cutter, cutter/pen/scissors etc.

Intelligent spacesaver
With the MARTOR BELT HOLSTER you will always discover new storage options. A compartment here, a slot there - all designed so precisely to ensure the contents are kept as firmly as necessary while offering you maximum flexibility.

2 attachment options
The belt holster can be attached to your belt in two ways: by clip-on or velcro-fastener. Velcro is recommended for belts, the clip can also be used on many other areas of your clothing, such as your trouser pocket.

Robust material
The BELT HOLSTER is now an integral part of everyday working life. So there is no inconvenience. This is further guaranteed by its durable nylon material, washable at 40°C, which is held together by double seams - even when subject to permanent use.

Your personal used-blade bank. The SAFEBOX is large enough to store a large number of used blades safely. And at the same time, it is compact enough to carry with you. The two slots are not only used for filling, but also to “shorten” your snap-off blades. When your SAFEBOX is full, empty it into your USED BLADE CONTAINER.

**PRODUCT DETAILS NR. 108000.00**

Blade change? Only the qualified. You can attach a U-shaped safety device to all SECUNORM PROFI cutters to prohibit blade change. When in place, the safety device can only be removed by leverage with a tool. The device works by disabling retraction of the plastic insert. Effectively hindering unqualified access to the blade.

SAFETY FINGER CATCH
NO. 103000.08

Danger! Hands off!
Have you noticed the small holes in the middle body of the SECUMAX PLASTICUT and the SECUMAX CARDCUT? The FINGER PROTECTION BRACKET fits exactly into these holes. Minimise the risk of your hand slipping whilst cutting and coming close to either the blade or the cutting material. Order it, fit it, and cut with confidence!

When looking for the best possible product there is nothing like personal assistance, which is one of our strengths. Nevertheless, we would like to satisfy your needs in the best possible way also in other areas - e.g. on our website www.martor.com. Where you can find new functionalities, such as the product filter, providing you with an even better overview of our cutting solutions.

Filter all
Which material do you want to cut? And what technical properties should your safety knives have? You can access a selection of suitable products quickly and comfortably through these and many other filter functions.

WWW.MARTOR.COM

Compare all
No doubt there are cutting tools in our product range that are similar. So it’s worth it to take a second view. With the functionality to compare products, you can select up to four cutting tools and check them against each other. Discover the product details to find the most suitable cutting tool.
OUR ADDITIONAL SERVICE MEDIA:
BROCHURES, CATALOGUES ETC.

Product flyer
Our most important cutting tools have their very own medium – the product flyer. They comprise all details of everything you need to know about the respective safety knife. As in the catalogue, products are shown in their original size to give you a better idea of the real tool.

Technical data sheet
How long and wide is the safety knife? What technical properties does it have? Which certifications has it received and when? The Technical Data Sheet will answer these and many other questions. You can use the compact collection of data and facts very well to introduce a new cutting tool in your inventory control system.

Promotional knives brochure
Another MARTOR product family is our promotional knives. They are introduced to you individually in this brochure. No matter whether you work as a distributor for promotional products or whether, as a company or institution, you are looking for the ideal promotional gift for yourself or your target group.

Safety poster
The safety poster is a combination of a short description and an operating manual. With large format images and short texts it illustrates the optimal use of our safety knives and supports the person assigned with safety matters. It is best to hang up the posters in relevant places - in storage rooms, in the area where goods receipt, in production sites etc.

You can request these and all other service media directly from us – ideally by calling our service number or by visiting our website, where they are available for download.
Initial contact and advisory services
Are you already our customer and would like to place an order? Or do you need specific help in selecting products? Our competent customer advisors will take care of you in this and any other matters - on the phone, by fax or by e-mail.

Quick delivery service
After consulting us, you will usually know which cutting tool fits best to your needs. Now you also want to hold it in your hands. As soon as you have placed your order, we quickly start processing to ensure a fast and reliable delivery.

Service media for a more in-depth knowledge
Our customer service advisors will also provide you with product specific service media, which will give you further information: catalogues, product flyers, safety posters, product and training videos, etc.

Training and instruction sessions*
On-site support can go even further if required, for example by attending an in-house exhibition on your company premises. Our training and instruction sessions are user specific - for an even more precise handling of our cutting tools. Our technical advisors also maintain close contact with safety specialists and professional business associations.

On-site assistance*
You have a problem with cutting and are looking for a customised solution? It’s also possible that our sales representatives will help you further directly at your work place. Please contact our customer service team to make an appointment.

*only in some countries
It’s all a matter of technology. Whatever applies to the safety of our cutting tools, also applies to their best possible use. Here are a few tips on how you can cut and trim even better. We have focused on the most common cutting types.

Make a window design
Cardboard boxes are ideal containers for transportation. The question is, what’s the best way to get to the contents. If you want to continue to use the cardboard box for storage, the window cut is recommended. You do not open the cardboard box from the top, but cut a larger hole into the side. You can remove your goods easily and comfortably through this “window.” This type of cut is particularly widespread in branch operations.

Remove the cover
If you would like to open your cardboard box from the top, then you should decide to remove the cover. As the name already suggests, you completely remove the cover by piercing the top edge and sliding your cutting tool along the bent fold once. You can also place your safety knife further down on the side wall and cut all around it once. Removing the cover can be done in the area where goods are received for example, if you want to take out the goods “in one piece.”

Separate plastic strapping bands
Plastic hoops are used to hold cardboard boxes with very heavy goods in them together. Or to fix several parcels on to a pallet. Many of our cutting tools are specialised in cutting open these hoops. We’re sure you will have to deal with tape of varying strengths and quality. The more robust they are, the more it is recommended to cut at a 45 degree angle.

Remove foil
Pallets are usually covered in wrapping and shrink foil. You can find the suitable cutting tools in our product range to take these off, too. Especially those with a concealed blade which also protects your packed goods. Our foil cutters usually have a pointed nose with which they can pierce into the cutting material. Or you can press the upper end of the foil together with your free hand and create an initial starting point for cutting.

Cut open sacks
Raw materials in the food, pharmaceutical and plastic processing industries in particular are often delivered in bags, e.g. liquids, powders or granulates. You usually use a safety knife with a longer blade to open the paper, plastic or composite material bags. To be precise, you lay the bag down horizontally on a parapet for bulk goods and cut it open, with a L-cut on the top, for example.

Slab off a roll
Even if you associate other things with the term, slabbing material of a roll is as one of the most widespread cutting types in the paper and film industry. There has often been an interruption in the production process beforehand. The goods on the roll tear onto the sleeve when rolling up. To make it usable again, the paper and film remains have to be peeled off. In other words: it is best to tear them open and remove them with a forceful cut. Also for this purpose, we have the ideal safety knife.
We want you to use our products safely and efficiently. An important prerequisite is to understand us and our cutting tools. For convenient and easy guidance, we have compiled a glossary for you. Here you will find explanations for all special terms we use.

A B

Adhesive tape remover
Some of our cutting tools have an additional adhesive tape remover. Examples: the SECUMAX COMBI or the SECUPRO LEWIS. In the SECUMAX COMBI it is a small metal plate integrated into the handle. In the SECUMAX 150, the two outer edges of the scraper area serve this purpose.

Automatic blade retraction
The blade retracts into the handle as soon as it leaves the cutting material. Condition: the slider is not held tight. Safety knives with automatic blade retraction are called SECUNDORM...

Blade access
Blade access in our safety knives with concealed blades determines the gap between handle and nose. It is always narrow enough for your finger not to pass through but also wide enough to be able to work on certain cutting materials.

Blade lock
Example: SECUNDORM POWERGUT. It has a sliding device with which you can fix the blade when it is fully extended.

Blade slot
The blade slot is at the front of the handle. The blade extends outside the handle here and gets back in again.

Blade with 1 cutting edge/2 cutting edges
Depending on whether the blade has 1 or 2 cutting edges, we talk of a blade with 1 cutting edge or 2 cutting edges.

Blade access in our safety knives with concealed blades determines the gap between handle and nose. It is always narrow enough for your finger not to pass through but also wide enough to be able to work on certain cutting materials.

Blade carrier
The blade is fixed by the blade carrier so that it does not slip. The blade carrier has one or several cams. These fit exactly into the respective blade.

Blade category
We call a specific superordinate group of blades a blade category. The designation takes place according to the shape (e.g. trapezium blade, hooked blade etc.), the area of use (e.g. industrial blade) or function (e.g. scraper blade, deburring blade).

Blade change button
In certain safety knives you can press or pull a blade changing button to start blade changing.

Blade changing device
If the safety knife does not have a button, but another device to change the blade, we talk of - in more general terms - a blade changer.

Blade cover
The blade cover is the small plate on which the blade lies. It holds the blade together with the blade carrier. In many of our cutting tools, you have to lift up the blade cover to change the blade.

Blade extension
The blade extension indicates the maximum length of the blade outside the handle and is usually longer than the cutting depth.

B C

Blade lock
Example: SECUNDORM POWERGUT. It has a sliding device with which you can fix the blade when it is fully extended.

Blade slot
The blade slot is at the front of the handle. The blade extends outside the handle here and gets back in again.

Blade with 1 cutting edge/2 cutting edges
Depending on whether the blade has 1 or 2 cutting edges, we talk of a blade with 1 cutting edge or 2 cutting edges.

Blade access in our safety knives with concealed blades determines the gap between handle and nose. It is always narrow enough for your finger not to pass through but also wide enough to be able to work on certain cutting materials.

Blade lock
Example: SECUNDORM POWERGUT. It has a sliding device with which you can fix the blade when it is fully extended.

Blade slot
The blade slot is at the front of the handle. The blade extends outside the handle here and gets back in again.

Blade with 1 cutting edge/2 cutting edges
Depending on whether the blade has 1 or 2 cutting edges, we talk of a blade with 1 cutting edge or 2 cutting edges.

Concealed blade
The cutting tool is designed in such a way that the blade is shielded outward. The result: a maximum degree of safety for the user. Safety knives with concealed blades are called SECUMAX.

Cutting depth
The cutting depth determines how deep the blade can penetrate into the cutting material. Since the cutting depth also depends on the cutting angle, it is usually lower than the blade extension.

Cutting edge
We call the sharpened part of the blade the cutting edge. If we only mean the front pointed piece, we talk of the blade tip.

Cutting edges
Example SECUMAX 150: If the blade is interrupted in the middle, depending on the design, and if two cutting areas are formed because of it, we describe this as cutting edges.

Cutting material
You will work on the cutting material with your cutting tool. Whatever you can cut particularly well with it comes under "main cutting materials", which could be single or multi-layered cardboard boxes, for example, plastic hoops or certain types of film.

C F

Cutting solutions
Together, our products, performance and services provide the guarantee for safe cutting solutions. Our solutions are always customised to a specific "cutting problem" for you locally, e.g. specific cutting work, a certain cutting environment and/or a special cutting material.

Cutting types
In the type of cut, we describe how or for what users use their cutting tool. Examples are: cutting with tension, cutting under pressure, forceful cut or cut out. The type of cut can also describe the result of cutting, for example, "window cut" or "removing the cover."

Cutting work
We call what you use our cutting tools for "cutting work."

Disposable cutter
Changing blades is not possible with our disposable cutters. You can just dispose of them through the scrap waste system after use.

Easier and safer blade changing
Most of our cutting tools are re-usable cutters. We have made blade changing as easy and safe as possible, so that you will not hurt yourself while doing so. And so that no blades get lost while changing them.

Ergonomic shape
If a cutting tool has been designed so that it is especially pleasant to hold it, we describe it as having an "ergonomic shape" or being "ergonomically shaped."

Eyelet
The eyelet is at the back of the handle. You can pull a strap through it to attach your cutting tool.

Fixing screw
Example SECUNDORM MULTISET: You can vary the cutting depth adjustment with the fixing screw.

For right and left handers
If a cutter can be used just as well by right and left handers, we highlight it in the form mentioned.

F N

Fully automatic blade protection cap
SECUPRO LEWIS is a special case: the blade does not retract after cutting. Still, you benefit from a high degree of safety. Because instead, a blade protection cap snaps into place in front of the blade as soon as it leaves the cutting material, without you having to do anything else.

Fully automatic blade retraction
The blade retracts into the handle as soon as it leaves the cutting material - even if the slider (or lever) is held tight. Safety knives with fully automatic blade retraction are called SECUPRO...

Fully automatic protective bracket
Special case: SECUPRO CUTF.O-MATIC: As soon as you have finished cutting, a protective bracket opens up in front of the blade. This safety technology doesn't exist in our safety knives.

Handle
The handle is the main component of our cutting tools. The slider, lever, buttons etc. can be found on the handle. The blade or the mechanism that pulls back the blade are concealed in the handle.

Installed blade
The blade with which the cutting tool is normally supplied is the installed blade.

Lever
The blade in our double lock cutters is not released by a slider but by a lever. You have to operate the lever in the lower handle area for this purpose.

Manual blade retraction
"Deblur" your cutting tool, you have to pull the blade back into the handle yourself after cutting. This safety technology doesn't exist in our safety knives.

Nose
You will only find a nose with a concealed blade in our safety knives. It shields the blade together with the handle. The nose is usually pointed at the front to make piercing easier for you.
One-sided/double-sided cut
Depending on whether the cutting edge is only sharpened on one side or on both sides, we describe it as a one-sided or double-sided edge.

Optional blade
You can fit almost all our safety knives that are not disposable cutters with an alternative blade according to requirement. This optional blade can be a hooked blade, for example (instead of the fitted trapezium blade). It can also be stainless steel or TiN-coated. Or it will have rounded off corners or blunt tips. Considering the approx. 200 blades in our product range, this is only a small selection of possible variants.

Plastic insert
Example: SECUNORM PROFI or SECUNORM HANDY: the complete inside part of a cutting tool that you have to pull out for blade change. We call it a plastic insert.

Plastic spring
In certain safety knives, the plastic spring is attached directly to the handle with a concealed blade and protrudes from that point into the area of the blade access. Your job: to keep the cutting material pressed down and to guide it to the blade in this way without jamming and buckling.

Product category
We call a specific superordinate group of cutting tools, product category. We have three of these: 1. Safety knives, 2. Cutter (fixed cutters, snap-off blade cutters), 3. Special cutters (scalpels, deburring cutters, scrapers, etc.).

Product family
We call a sub-group of cutting tools connecting a certain characteristic, a product family. These can also be found in various product categories. Examples are: MDP cutters, disposable cutters, promotional knives, snap-off blade cutters, double lock cutters etc.

Product range
All the products combined (cutting tools, blades, accessories) form our product range.

Productivity
The better (faster, safer, more precisely), users cut and the less often they hurt themselves while doing so, the higher their productivity. The company as a whole also benefits from it.

Promotional knives
There is also a promotional knife variant of many of our cutting tools. In other words, without a MARTOR logo but with space for your logo or your claim. A premium give-away for your customers, friends and partners with a high user value and a long life. Ask us for special colours and other specific designs.

Quality blade
All MARTOR blades are quality blades. Still, there are differences here, which we will tell you about personally, e.g. stainless steel or TiN-coated.

Safety catch
The safety catch prevents the blade from driving out of the handle unintended. Releasing the blade is usually done with the same element.

Safety knives
Even if we have other high quality cutting tools in our product range: safety knives are our core competence. They are called safety knives because they have a reliable safety technology: the automatic and fully automatic blade retraction and the concealed blade. By using our safety knives the number of cut injuries can be clearly reduced at any work place.

Safety level
We differentiate between four safety levels: simple safety (manual blade retraction), a high degree of safety (automatic blade retraction), a very high degree of safety (fully automatic blade retraction) and maximum safety (concealed blade).

Safety technology
Our safety technology means: manual blade retraction (only in non-safety knives), automatic blade retraction, fully automatic blade retraction and the concealed blade.

Slider
Most of our safety knives with automatic or fully automatic blade retraction are fitted with a slider. By pressing the slider to the front, you can release the blade.

Sliding base
In some of our safety knives with concealed blades, the handle leads into a sliding base. As the name suggests, the bottom of the base slides smoothly over the cutting base. At the same time, the cutting material is lead to the blade over the top of the sliding base.

Soft grip
We describe the soft plastic layer that makes a handle particularly resistant to slipping a soft grip.

Squeeze lever knife
Current examples: SECUPRO 625, SECUPRO MARTEGO, SECUPRO MERAK and SECUNORM MIZAR. All these cutting tools belong to the young product family of innovative squeeze lever knives. As with tongs, you will find an easily movable lever at the bottom of their handles. You can release the blade very comfortably with it.

TiN-coated
TiN stands for titanium nitride, a chemical compound comprising titanium and nitrogen. This material is known for its extreme hardness and corrosion resistance. Our TiN-coated blades are therefore subject to less wear and have a longer service life with a constant high-level of sharpness.

Used blade container
You will find two different storage containers in our range of accessories, the SAFEBOX and the SAMMELBOX with which you can safely dispose of your used blades.

User
We like to call anyone working with our cutting tools a "user".

Wall strength
Some of our paper and film cutters are so delicate that we do not talk of "width" when talking about dimensions. Instead, we indicate the wall thickness, which is 2 or 3 mm, for example - the perfect solution for cutting in narrow slots and narrow spaces in between.
WELCOME TO THE WORLD OF SAFE CUTTING.

COMPLETE TABLE OF CONTENTS

OUR PICTOGRAMS: ALL FEATURES AT A GLANCE.

Our pictogram system helps you to examine yourself quickly, to compare products comfortably, and see the features which are useful for your cutting application at first glance.

TECHNICAL FEATURES

Your safety.

A glance at the icon is enough to see if a knife or scissors is cutting fast enough for you to keep a safe distance. How does it work? It is based on the principle that the manufacturer uses safety technologies which are already in use.

All about handles

Is a handle change possible? And, if so, with or without a tool? How large is the handle? How deep does it cut? It sometimes depends on every millimeter here. So take a good look!

All about knives

Which product is best for which kind of material? Even if many of our safety knives are multi-talented, there are also subtle differences. These icons will assist you when searching for the best possible cutting solution.

ACCESSORIES

Everything that makes your work easier is valuable. From belt holster to locking key to used blade container. Here you can find the relevant accessories for each product.

MAIN CUTTING MATERIALS

Accessories

THE REFINEMENT:

SERVICE AND ADVICE OF MARTOR.

What is it that makes our cutting solutions even safer? Our advisory services. We are always there for you and help you with usage examples, training material and, of course, personal assistance.

You will find further information on our website: www.martor.com

At a glance: the safety poster shows the most important functions and correct usage – perfect for your workplace.

From the first step to changing the blade: our videos give you a good impression how and for what you can use our cutting tools.

Everything you want to know: dimensions, properties, special features and more about our cutting tools can be found in the Technical Data Sheet.

Any further questions? Then please do not hesitate to contact our customer service team.
