FX-100

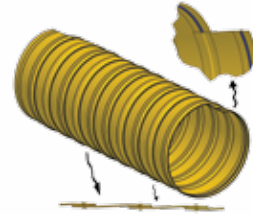

FX100

Reinforced tubes

The FX100 is specifically designed to weld flexible reinforced ducting or tubing. This machine will weld reinforced tubes from a 2-inch diameter to a 48-inch diameter. The FX100 can easily add a wear strip to the outside.

FX100 Seam Types:

m-100

M100 Three Roll Ducting System

Fully automated ventilation tubes

The M100 Three Roll Ducting System is designed for manufacturing ventilation tubes. It will weld several panels together into a tube, create t-tape, weld the t-tape onto the large tube, grommet the t-tape and cut the entire welded tube to length simultaneously and fully automated. These systems are designed to greatly increase production while substantially reducing cost.

M100 Three Roll Seam Types:

modulīnē SYSTEM

Moduline for Ventilation Ducting

Fully Automated Ventilation Ducting Manufacturing

Designed for the customer looking to increase business profits by automating their production process. Our Moduline System is versatile and is built with plug-and-play options to meet all your production needs.

Moduline Seam Types:

Automate your business...Accelerate your profits!
