

More libraries around the world rely on EnvisionWare for computer access and reservation control than any other provider. Created by some of the world's leading librarians and library staff, PC Reservation® provides a complete solution for libraries of all types and sizes. Whether you manage a small library or a consortium, EnvisionWare offers the versatility and reliability that's a perfect fit for any public library.

Take the Guesswork out of Scheduling

Our intelligent scheduling system makes it easy for patrons to know the exact time the computer will become available, taking the guesswork and wait out of the experience. Provide first-come, first served access at a Windows or Mac computer, or advanced reservations that are managed with varying policies in a range of groups across each branch.

- Multiple options for booking, from next available to scheduled reservations
- Works with Windows 7 through 10, Server 2008 through 2012R2, Terminal Services, and macOS X
- Run-ready experience for those who desire a simple installation
- Ability to meet diverse library and campus policies
- Centralized control and reporting options
- No local client configuration for easy deployment, changes and upgrades
- Auto-update regardless of public computer privileges
- Seamless integration with EnvisionWare's print management software for complete computer and print control
- Multiple groups per branch with granular access and filtering policies

EnvisionWare computer and print management products are available separately or for purchase as part of a suite. The suite provides special combined and simplified pricing for PC management with print control for a complete computer management solution.
